SECRET ECONOMIC PROFILE, 1966 **EUROPEAN NATO** LAND MASS: 2,877,000 square kilometers INHABITANTS: 295.5 million GNP: US \$510 billion **CANADA** LAND MASS: 9,976,000 square kilometers INHABITANTS: 20.0 million GNP: US \$ 55 billion US LAND MASS: 9,363,000 square kilometers INHABITANTS: 196.8 million GNP: US \$ 718 billion CUBA[†] LAND MASS: 115,000 square kilometers INHABITANTS: 7.4 million GDP: US \$ 2.9 billion (1957 prices) NOTE: The data for gross national product (GNP) are for 1966 (in 1965 prices) converted to US purchasing power equivalents, except for India, Cuba, North Vietnam, and North Korea. Data for India (in 1965 prices) and Cuba (in 1957 prices) are gross domestic product (GDP) for 1966 converted to US dollars using prevailing exchange rates. Data for Cuba are given in 1957 prices to minimize the inflationary effects during the last several years. Data for GNP for North Vietnam are for 1964 and for North Korea; 1965. All data on inhabitants are for midyear 1966 and data on land mass are for the latest year available.

FOREWORD

1. Purpose and Scope

The Economic Intelligence Statistical Handbook, 1967 provides statistics on the economies of the Communist countries and the countries of the North Atlantic Treaty Organization (NATO)—including France. The content and format have been revised to make possible more explicit comparisons and new tables and graphics have been added.

In general, the data in the *Handbook* are for 1955 and 1960-66. A summary table is presented for European NATO, Eastern Europe, each of the Communist countries, selected NATO countries, India, and Japan. The data for Mongolia, because of their scarcity, are presented in a summary table but are not included in the individual commodity or aggregative tables. The graphics and tabular graphics are designed for use as visual aids. Footnotes have been used liberally to give definitions, exceptions, and methodology. Footnotes to the commodity tables give more detailed definitions of the data than those appearing for the commodities on the summary table for each country. Therefore, the footnotes to the commodity tables should be referred to when a complete description of the data shown is required.

2. Rounding of the Totals

In each table the data for the individual countries have been rounded consistently. Because of the limitations in the cumulative data, the totals have been rounded, with some exceptions, to three significant digits. In general, zeros appearing after the last nonzero number following the decimal point are not significant but are used merely for consistency in presentation.

Totals are not presented if missing data are believed to represent a significant part of the total. In general, data are not given for countries for which a significant amount of data is not available. Because of rounding, components may not add to the totals shown.

3. Symbols

The abbreviation N.A. (not available) is used when information about the existence of the data or the magnitude of the data is not available, and the abbreviation Negl. (negligible) is used when the magnitude of the data is less than half of the final unit employed for each table. The metric system is used throughout.

4. Classification of Data

The unclassified data, indicated by an asterisk (*), may be official data of the country cited or may be unclassified estimates of this Office. Tables in which all of the data are unclassified have been identified accordingly. Classified data, however, frequently occur on the reverse of the page, and, therefore, caution should be exercised if pages are removed from this publication.

5. Sources

The data given for the most recent years are frequently preliminary and subject to revision. The data for the Communist countries are estimates of this Office, official data from the country cited, or estimates made by other organizations. The data for the NATO and other Free World countries are from publications of the United Nations and the Organization for Economic Cooperation and Development (OECD), are from unclassified publications of other international organizations or individual countries of the Free World, or are estimates of this Office.

6. Terms

Unless otherwise indicated, the term Communist Countries includes the USSR, the countries of Eastern Europe, Communist China, North Korea, North Vietnam, Albania, Cuba, and Yugoslavia; the term Eastern Europe includes Bulgaria, Czechoslovakia, East Germany, Hungary, Poland, and Ru-

25X1

mania. The term NATO includes the United States, Belgium, Canada, Denmark, France, Greece, Iceland, Italy, Luxembourg, the Netherlands, Norway, Portugal, Turkey, the United Kingdom, and West Germany. The term developed countries includes Austria, Belgium, Denmark, Finland, France, Iceland, Ireland, Italy, Liechtenstein, Luxembourg, Norway, the Netherlands, Sweden, Switzerland, the United Kingdom, West Germany, Australia, Canada, Japan, New Zealand, South Africa, and the United States. The term less developed countries of the Free World includes (1) all countries of Africa except the Republic of South Africa and the United Arab Republic; (2) all countries in South and

Southeast Asia, including Afghanistan; (3) Portugal and Spain; (4) all countries in Latin America except Cuba; and (5) all countries in the Middle East including—in addition to those normally designated—Cyprus, Greece, Turkey, and the United Arab Republic.

As far as possible, production data for the Saar have been included in the data for West Germany for all years, unless otherwise indicated. Data for Alaska and Hawaii, when available, have been included in the total for the US. Data for any of the above country groupings may or may not include all of the countries listed above, depending on the commodity or services listed.

^{*} An asterisk indicates that the data are unclassified.

Because of adjustments in the constant price valuation as well as a revision in definitional concept, the old official Soviet investment series cannot be extended beyond 1964. Nor can the new official series be extended backward for the years before 1964 except for two or three isolated years. The two series may be linked, however, through the common year 1964. Thus, annual growth rates for 1965 may be calculated without significant distortion by using 1964 data in the new series as the base.

b All data are expressed in investment prices of 1 July 1955 adjusted for new unit valuations introduced in 1956, for the reduction of overhead cost norms in 1958, and for the reduction of equipment installation prices in 1959. In addition, the new series reflects adjustments for the reduction in 1962 of prices for project-survey work and of unit valuations for certain types of construction-installation work, as well as the exclusion—for reasons unexplained—of "outlays for the acquisition of equipment for existing state institutions, schools, hospitals, kindergartens, and nurseries." As a result of these differences, 1964 investment under the new series is 952 million new rubles less than under the old series, including a difference of 184 million new rubles in construction, 468 million new rubles in equipment, and 300 million new rubles in other capital outlays.

[•] Preliminary estimate.

d Excluding the construction industry.

 $\begin{tabular}{ll} Table 13 \\ \hline Drawings and Scheduled Repayments on Western Credits to the USSR \begin{tabular}{ll} \label{table 13} \end{tabular}$

^{*} An asterisk indicates that the data are unclassified.

[•] The base year is the year before the first year of the stated period and percentages for the plan data are based on the midpoint of the ranges.

b The official Soviet measure is based on a Marxist concept of national income and differs significantly from the concept used in Western market economies. For example, the Soviet measure excludes the value of services and overstates the contribution of industry by including all indirect taxes.

o Official "gross" value series.

d Including production of gas from coal and shale. Table 110, p. 113, excludes production of gas from these sources.

[•] Expressed in 1955 prices.

Table 19

Distribution of Defense and Space Expenditures, * by Major Mission in the US and the USSR
1966

	1.6 30.2 15.0	USSR • (C	alendar Year)
Strategic attackStrategic defenseGeneral purpose		Billion 1964 US \$	Billion New Rubles ^d
Strategic attack	. 4.6	5.4	2.4
8		$\bf 5.2$	2.2
G		17.0	5.7
RDTE & S		12.0	$\bf 5.2$
		14.6	3.8
Total		54.2	19.3

[■] To achieve as high a degree of comparability as possible, adjustments have been made to the basic data available for both the US and USSR. For example, the ruble data, by mission, shown here differ somewhat from the comparable 1966 data shown in Table 20, p. 20. All expenditures for research, development, test and evaluation activities associated with military programs as well as expenditures for both civilian and military space programs have been aggregated and are included under RDTE & S. All expenditures for nuclear warheads have been aggregated and are included under "Other." All expenditures for military assistance and civil defense programs have been excluded.

b Planned total obligational authority (TOA). It should be noted that the pattern of expenditures shown for the US is not representative of the pre-Viet Nam period.

[•] These data for the USSR are reviewed and updated several times each year. Therefore, if they are to be used for more than general background purposes, this Office should be consulted to insure that they represent the latest available information. The Soviet expenditures presented in dollars are measures of Soviet programs computed on the basis of US factor costs and do not measure program costs as seen by Soviet planners.

^d Expressed in 1955 prices.

Of which:								
Military machinery	7.9	9.1	9.6	10.3	10.6	10.5	10.8	12.3

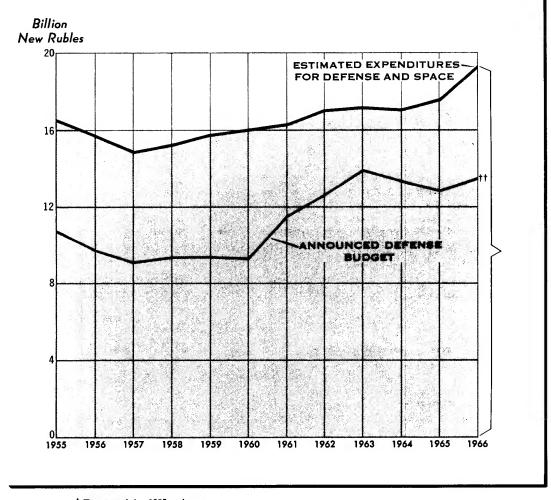

[•] These data are reviewed and updated several times each year. Therefore, if they are to be used for more than general background purposes, this Office should be consulted to insure that they represent the latest available information. The estimates conceptually include all outlays for personnel and other operating costs, procurement of all hardware used by the military establishment (including nuclear warheads), construction of facilities, military and nuclear research and development activities, and all space programs but exclude military assistance programs. Many of the funds required to cover these expenditures come from sources other than the budget category labeled "Defense" by the USSR. Most of the figures in the table are derived from detailed calculations of the estimated size and cost to deploy and operate individual program elements of the Soviet military establishment. The underlying calculations produce numbers that suggest a high degree of accuracy. In fact, however, these estimates are subject to considerable uncertainty and should not be considered as precise measures. Nevertheless, the estimates are as accurate and as comprehensive as the data available on 15 May 1967 permitted.

- b Expressed in 1955 prices.
- Including expenditures for tactical aviation.
- d Including expenditures for naval aviation.
- Expenditures for research, development, test, and evaluation for all military and nuclear energy programs as well as all expenditures for military and civilian space programs. These estimates are derived from analysis of published Soviet financial data and do not represent detailed calculations of the estimated magnitude and cost of individual programs.
- ^f Expenditures for reserve training, militarized security forces, retirement pay, and paramilitary training, in addition to command and support for the active military establishment.

^{*} An asterisk indicates that the data are unclassified.

[•] Excluding the armed forces.

b Annual averages of monthly data. Data are for civilian employment and differ from those presented in Table 148, p. 145. Data in Table 148 are for farm employment and include farm operators doing 1 or more hours of farm work and members of their families working 15 hours or more during the survey week without cash wages. Data in Table 148 are based on a survey of farm payrolls conducted by the US Department of Agriculture. Data for the agricultural labor force are based on a household survey of the entire population conducted by the US Bureau of Census. Data in Table 148 are a more comprehensive count of agricultural employment and are considered to be more comparable to data presented for the USSR, whereas data in this table are considered to be more comparable to data presented for the Communist countries as a whole.

[·] Excluding militarized security forces.

b Including data for West Berlin.

Energy expressed in coal equivalents has a calorific value of 7,000 kilocalories per kilogram.

d Data are for barley, corn, oats, rice, rye, and wheat where they are produced.

Annual average for 1955-59.

Data are carcass weight, bone-in basis, and are for beef, veal, pork, mutton, lamb, goat, and horsemeat where they are produced.

Data are for "fertilizer years"—that is, in general, the year beginning 1 July of the stated year.

^{*} An asterisk indicates that the data are unclassified.

⁻ Converted at US purchasing power equivalents in approximately the same manner as the data for the NATO countries found in Table 2, p. 2. A 1960 geometric conversion ratio has been constructed by Irving Kravis in Journal of Political Economy, August 1963, p. 327, and the conversion was moved forward by the appropriate index numbers.

b Data are carcass weight, bone-in basis, and are for beef, veal, pork, lamb, mutton, goat, and horsemeat.

o Including whale catch.

d Estimated from planted acreage.
Annual average for 1955-59.

¹ Gross register tons.

^{*} An asterisk indicates that the data are unclassified.

Converted at US purchasing power equivalents.

^b Average annual employment. Data include the armed forces and the unemployed but exclude militarized security forces.

Energy expressed in coal equivalents has a calorific value of 7,000 kilocalories per kilogram.

d Gross production less losses and waste. Data include only nonassociated

gas from natural gas wells and associated gas from petroleum fields.

[•] Data are for barley, corn, oats, rice, rye, wheat, and miscellaneous grains including pulses.

Annual average for 1955-59.

^{*} Data are carcass weight, bone-in basis, and are for beef, veal, pork, mutton, lamb, goat, slaughter fats, poultry, and edible offal.

^{*} An asterisk indicates that the data are unclassified.

Converted at US purchasing power equivalents.

b Energy expressed in coal equivalents has a calorific value of 7,000 kilocalories per kilogram.

Bulgarian data for 1955 are excluded from the total because they refer to blister copper rather than refined metal.

d Data are for barley, corn, oats, rice, rye, and wheat where they are produced.

[•] Annual average for 1955-59.

Data are carcass weight, bone-in basis, and are for beef, veal, pork, mutton, lamb, goat, and horsemeat.

42

SECRET

[·] Converted at US purchasing power equivalents.

b Including the armed forces and the unemployed.

[•] Energy expressed in coal equivalents has a calorific value of 7,000 kilocalories per kilogram.

d Data are for barley, corn, oats, rice, rye, and wheat.

[•] Annual average for 1955-59.

Data are as of 1 March of the stated year.

Data are carcass weight, bone-in basis, and are for beef, veal, pork, mutton, lamb, goat, and horsemeat, and include live exports.

b Fabrics after undergoing finishing processes.
I Including performance by railroads owned jointly by Hungary and Austria.

- * An asterisk indicates that the data are unclassified.
- Converted at US purchasing power equivalents.
- ^b Estimates of this Office computed by applying value-added weights to data for commodity production.
- Data exclude the armed forces but include the unemployed.
 Energy expressed in coal equivalents has a calorific value of 7,000 kilocalories per kilogram.
 - Including a negligible amount of brown coal.

- ^t Including 13.4 million metric tons of pig iron made in "small blast furnaces," of which 6.5 million metric tons were usable for steelmaking.
- Data are for wheat, rye, barley, oats, corn, and rice, and also include kaoliang, broad beans, and field peas. Tubers are included on a grain equivalent basis of 4 metric tons of tubers to 1 metric ton of grain.
 - h Annual average for 1957-59.
- Data are in terms of product weight containing 20 percent nitrogen (N), 18.7 percent phosphoric acid (P2O5), and 40 percent potassium oxide (K2O).

UNCLASSIFIED

Exports are domestic exports only, excluding reexports, and are valued f.a.s. Except for 1955, exports include data for Estonia, Latvia, and Lithuania, which are treated separately in Department of Commerce statistics.

b The minor differences between the totals shown on this table and those shown on Table 54, p. 54, are due to differences in definition.

^c Excluding US wheat shipped from a Canadian port, as reported by US grain inspectors, of 4.1 million bushels valued at US \$7.4 million. The final destinations were unknown at the time of export from the United States.

d Imports for 1955 and 1960-62 are for consumption only whereas imports for 1963-65 are general imports. Imports are valued f.o.b. port of export and, except for 1955, include data for Estonia, Latvia, and Lithuania, which are treated separately in Department of Commerce statistics.

[•] Data may include unrefined metal.

^{*} An asterisk indicates that the data are unclassified.

[•] Data for 1955 and 1960-65 for exports of total petroleum, crude oil, and petroleum products and for exports to the Communist countries are official Soviet statistics. Data for the Free World are derived as residuals and include exports for which the importing country is not specified. Therefore, the values in this table will differ slightly from the sum of the data from Table 66, p. 66, and Table 68, p. 68. Cuba is included in the Free World in 1955 and in the Communist countries in 1960-66.

• Estimated. Value data are based on constant 1965 average prices.

2.0*

Data are for coal, crude oil, natural gas, and hydroelectric power expressed in terms of coal equivalents (calorific value of 7,000 kilocalories per kilogram), and exclude minor fuels such as peat, shale, and fuelwood.

b The following coefficients were used to convert the sources of primary energy into hard coal equivalents: coal (metric tons), 1.0; brown coal and lignite (metric tons), 0.29; crude oil (metric tons), 1.3; crude natural gasoline (metric tons), 1.5; natural gas (1,000 cubic meters), 1.33; and hydroelectricity (1,000 kilowatt-hours), 0.55. Production of geothermal and nuclear electric power is included at the same ratio as hydroelectricity.

o Including data for Luxembourg.

^a Data include only nonassociated gas from natural gas wells and associated gas from petroleum fields.

b NATO totals include only data for the US and those NATO countries that are listed under "Other NATO Countries." Data are for net production—that is, for gas actually collected and utilized as fuel or raw material. They thus exclude gas used for repressuring, as well as gas flared, vented, or otherwise wasted, whether or not it has first been processed for the extraction of natural gasoline.

° Data for the US are in terms of net marketed production and agree with the general definition for the NATO data. Data for the USSR are believed to refer to gross production less losses and waste. US gross production (less losses and waste), which would include gas returned to reservoirs in order to maintain horizon pressure (about 9 percent of gross production in 1965) would be as follows (billion cubic meters):

 1955
 1960
 1961
 1962
 1963
 1964
 1965

 310
 411
 423
 442
 470
 484
 500

A much smaller share of total production in the USSR is believed to be used for repressuring.

- ^d Gross production.
- · Including methane (dry) gas and wet gas from oilfields.
- Including gas used for repressuring and wasted.

^{*} An asterisk indicates that the data are unclassified.

^{*} An asterisk indicates that the data are unclassified.

[•] Data are for total (gross) production at generating centers and therefore include transmission losses and station use. (See footnote b, below.)

b Data are gross production or estimates of gross production based on reported net, adjusted by increasing by 7.5 percent the thermal electric production to include production that is consumed by the station itself. Hydroelectric production that is consumed by the station itself is a negligible part of the total gross production. Therefore, no attempt has been made to adjust the net production for hydroelectric power.

[•] Including data for West Berlin, for which separate data are not available.

d Data are for the year beginning 1 April of the stated year.

• Unless otherwise indicated, data are for the gross amount of marketable iron ores in the state in which they leave the mines, including manganiferous ores but excluding pyrites.

• Excluding manganiferous iron ore containing 5 percent or more of manganese.

119

^{*} An asterisk indicates that the data are unclassified.

b NATO totals include only data for the US and those NATO countries that are listed under "Other NATO Countries." The metal content of the ore in the NATO countries and other Free World countries follows: Austria, Luxembourg, and the UK, 27 to 30 percent; Belgium, France, and West Germany, 31 to 34 percent; Greece, Italy, Portugal, Spain, and the US, 46 to 50 percent; Canada and Japan, 55 percent; Sweden and Turkey, 60 to 61 percent; and India, Norway, and Venezuela, 57 to 62 percent. The metal content of iron ore in Denmark is not available.

d The metal content of the ore in selected Communist countries follows: the USSR, in terms of dressed ore, 55 percent of the ore; Communist China, 20 to 50 percent; North Korea, 40 to 50 percent; Albania, 50 to 55 percent (1 percent nickel); Bulgaria, 38 to 50 percent; Czechoslovakia, 34 percent; East Germany, 25 to 30 percent; Hungary, 24 to 28 percent; Poland, 30 percent; Rumania, 32 to 40 percent; Yugoslavia, 40 percent; and North Vietnam, 55 percent.

[•] Plan data.

Based on an announced increase for 1965 of 24 percent applied to 1964 plan data.

Iron-nickel ore that is mined for its nickel content.

^b Shipments.

i Data are for concentrates only and exclude titaniferous ores.

i Excluding certain grades.

^{*} Merchant ores and concentrates.

¹ Including data for West Berlin, for which separate data are not available.

Including iron sand and pyrites.

n Including concentrates.

- * An asterisk indicates that the data are unclassified.
- Unless otherwise indicated, data are for refined metal.
- b NATO totals include only data for the US and those NATO countries that are listed under "Other NATO Countries."
- Nickel recovered from refined domestic ore and nickel recovered as a byproduct of electrolytic refining of copper. Secondary nickel produced from nonferrous scrap is excluded.
 - d Nickel content of oxides and sulfides.
- Production of nickel in all forms for Canada (refined nickel, nickel in oxide produced, and recoverable nickel in matte exported) follows (in metric tons): for 1955, 158,690; for 1960, 194,600; for 1961, 211,400; for 1962, 210,700; for 1963, 198,700; for 1964, 207,300; and for 1965, 236,900. Much of this production is exported for refining in other countries, especially the UK and Norway.
 - f Excluding data for New Caledonia.
 - " Data are for 1964 and are included in the NATO total for 1965.

^{*} An asterisk indicates that the data are unclassified.

[•] Unless otherwise indicated, data are for electrolytic and distilled (including redistilled) zinc produced from domestic and imported ores and scrap and other secondary materials.

b NATO totals include only data for the US and those NATO countries that are listed under "Other NATO Countries."

[•] Including production from secondary smelters. Production of primary zinc in the US was as follows (in metric tons): 1955, 874,100; 1960, 725,300; 1961, 768,200; 1962, 797,800; 1963, 809,700; 1964, 865,500; 1965, 901,700; and 1966, 928,100.

d Primary metal only, representing slightly less than 80 percent of total production.

[•] Annual production consists of zinc produced from ore except for approximately 3,000 metric tons in 1955 and 4,000 metric tons annually for 1960-66.

• Power-driven metalforming machine tools that are not supported in the hands of an operator when in use and are designed to press, forge, emboss, hammer, extrude, blank, spin, shear, and bend metal into shape.

b Excluding manually operated bending and forming machine, spinning lathes, and riveting, can-making, diecasting, wire-weaving, wiredrawing, knurling, and marking machines, which usually are included in the definition of metalforming machine tools by the US Department of Commerce.

^b Rolling mill equipment only.

UNCLASSIFIED

[•] Unless otherwise indicated, data are for rolling mill equipment; mechanical equipment for coke, blast, and smelting furnaces; mixers; crushers; grinding mills for ore and coal; agglomeration installations; and special hoist-transport mechanisms for metallurgical shops. Equipment for nonferrous shops is believed to be included but probably amounts to only a small percentage of the total physical volume. Data for the US are not available in terms of metric tons.

^{*} An asterisk indicates that the data are unclassified.

Turbogenerators and hydrogenerators. Production of diesel generators is believed to be negligible in most instances.

b Shipments of units 4,000 kilowatts and larger.

[·] Generators for steam and gas turbines only.

[•] Unless otherwise indicated, data are for steam and hydraulic turbines. Most production of turbines is for use in matched sets with generators for production of electric power. In addition, turbines are produced in single units for many purposes, including direct industrial drives, marine propulsion, and pipeline transmission.

b Shipments of units 4,000 kilowatts and larger. Data are available only for turbines produced as integral units together with generators. Therefore, data for turbines and generators for the US are assumed to be the same. Some turbines are produced in single units but no data are available on this production.

o Including a small number of gas turbines.

d Steam turbines only.

[·] Steam turbines of more than 500 kilowatts only.

- * An asterisk indicates that the data are unclassified.
- Because of the difficulty of determining valid rates of exchange, data are not presented in terms of a common currency. Official parity rates should be used with caution because they have been established and maintained arbitrarily and do not necessarily reflect the true ratio for construction. For example, the estimated ruble-dollar ratio for construction in the USSR in 1955 prices is about 0.70 new ruble to US \$1.
 - b State sector, private housing construction, and construction-installation work performed by collective farms.
- Expressed in investment prices of 1 July 1955 adjusted for new unit valuations introduced in 1956, for the reduction of overhead cost norms in 1958, and for the reduction of equipment installation prices in 1959. In addition, the series reflects adjustments for the reduction in 1962 of prices for project-survey work and of unit valuations for certain types of construction-installation work.
 - d Excluding private construction.
 - · Excluding capital repairs.
 - Deutsche Mark East (East German marks).
 - Socialized sector.
 - b Expressed in 1961 prices. A currency reform of August 1965 revalued the lek at a ratio of 10 old leks to 1 new lek.

UNCLASSIFIED

[•] The total land area of the country and, unless otherwise indicated, bodies of inland water.

^b Arable land includes land planted to crops (with double-cropped areas being counted only once); land temporarily fallow; temporary meadows for mowing or pasture; garden land; land under fruit trees, vines, and fruit-bearing shrubs; and rubber plantations.

One hectare equals 2.471 acres. Data are for various years during 1957-66.

d Land area only.

[•] Total agricultural area.

^t Land belonging to agricultural holdings exceeding 0.405 hectare (1 acre).

Continental sector only.

h Including data for Kashmir-Jammu.

¹ Including data for the Balearic and Canary Islands.

i Official Soviet data (22,402,200 square kilometers) include the White Sea (90,000 square kilometers) and the Sea of Azov (40,000 square kilometers), which are excluded by definition from the data shown.

Including only plowland and lands formerly cultivated but now idle.

^{*} An asterisk indicates that the data are unclassified.

The years refer to the crop years—that is, the year ending 30 June of the last year of the 2 years stated.

b Data are for cleaned rice, jowar, bajra, corn, ragi, small millets, wheat, and barley. Production data relate to harvests mostly completed within the stated calendar years and have been reduced by 12.5 percent to eliminate amounts used for feed, seed, and waste. Therefore, these data differ from those presented in Table 32, p. 32.

[·] A minus sign indicates amounts reserved for stocks; a plus sign indicates additions to net availability from stocks.

d Including data for Sikkim and Kashmir-Jammu. Midyear population is used because crop production in India occurs at a period different from that in most other Northern Hemisphere countries.

^{*} An asterisk indicates that the data are unclassified.

[•] Unless otherwise indicated, data are for beet sugar produced in the calendar year. Data are given in terms of the raw value of centrifugal sugar. Refined sugar is equal to approximately 90 percent of raw sugar by weight. Centrifugal, as distinguished from noncentrifugal, sugar includes cane and beet sugar produced by the centrifugal process and is the principal type of sugar moving in international trade.

b NATO totals include only data for the US and those NATO countries that are listed under "Other NATO Countries."

o Including cane sugar.

d Refined, including imported raw sugar.

[•] Data are for the campaign year beginning in September of the year stated and ending in March of the following year.

f Data are for 1957.

^{*} Cane sugar only.

h Including data for Luxembourg.

i Data are for the Azores and Madeira only.

^{*} An asterisk indicates that the data are unclassified.

[•] Total traffic for all urban streets and rural roads. These data are partly estimated. The data differ from those presented in the previous *Handbook* because of a revision in the estimate of the relationship between intercity traffic and total traffic on urban streets and rural roads.

b Including inland waterway, coastal, and intercoastal freight traffic. The US includes Great Lakes freight traffic, and the USSR includes Caspian Sea freight traffic. Data for the US differ from those in the previous Handbook, in which data included foreign trade within domestic waters and some double counting of coastwise traffic within domestic waters.

- * An asterisk indicates that the data are unclassified.
- Data exclude urban systems; plantation, forest, mine, industrial plant, underground, funicular, and cable railways; and short lines of little importance. Unless otherwise indicated, data are for the state or principal railroad system and include all goods and livestock carried during the calendar year and exclude service traffic, mail, and nonrevenue government stores. Freight traffic carried on more than one railroad line within a country is counted only once. Foreign trade freight traffic carried through more than one country, however, is counted in each country. Data for the US include express and mail and are specifically for revenue and nonrevenue freight traffic for a more realistic comparison with Soviet methods of reporting.
 - b NATO totals include only data for the US and those NATO countries that are listed under "Other NATO Countries."
 - Including secondary or private railroads operating as common carriers.
 - 4 Including performance of railroads owned jointly by Hungary and Austria.
 - Including service traffic.
 - Including mail and passenger baggage. Data are for the year beginning 1 April of the stated year.
 - Including military and government traffic.
 - h Excluding livestock.
 - i Excluding express parcels.
 - i Including data for the Ofoten railroad.
 - Lata are for the year beginning 1 July of the previous year.
 - ¹ Excluding data for Northern Ireland.

* An asterisk indicates that the data are unclassified.

NATO totals include only data for the US and those NATO countries that are listed under "Other NATO Countries."

O Data for North Korea are included with ocean freight traffic in Table 175, p. 171.

d Traffic began in June 1964.

• Data are for June-December 1964 and are included in NATO total for 1965.

b Traffic on all US waters except on the Great Lakes—that is, including not only internal, intraport, and local traffic but also coastwise and foreign trade traffic within US waters. For 1964 it has been calculated that coastwise and foreign trade traffic within US waters together amounted to about 60 billion metric ton-kilometers. In the same year traffic on the Great Lakes amounted to 107 billion metric ton-kilometers of domestic trade and 47 billion metric ton-kilometers of US foreign trade.

^{*} An asterisk indicates that the data are unclassified.

Data are as of the end of the year and exclude light aircraft.

b Data differ from those presented in the previous Handbook, which included aircraft in operations of certificated route air carriers. In order to present a more realistic comparison between the US and the USSR, US data have been revised to include all aircraft that perform commercial for-hire operations, and to exclude light aircraft and helicopters.
In the US, there are more than 1,400 multiengine aircraft of more than 2,000 horsepower, which are operated by private corporations and individuals. The USSR has no counterpart.

The large increase in the inventory shown for helicopters from 1964 to 1965 is probably due to inadequate intelligence reporting of the helicopter inventory before 1965, rather than to any absolute increase of this magnitude.

^{*} An asterisk indicates that the data are unclassified.

^{*} Unless otherwise indicated, data are for the state or principal railroad system and include diesel, diesel-electric, steam, and electric locomotives. Unless otherwise indicated, data are as of the end of the year.

b NATO totals include only data for the US and those NATO countries that are listed under "Other NATO Countries."

Including secondary or private railroads operating as common carriers.

d Including gas turbine locomotives.

^{*} As of 31 March of the stated year.

Data for government railroads are for 1965, and data for private railroads are for 1964.

Data are for 1964 and are included in the NATO total for 1965.

h Including data for Northern Ireland.

Table 204

Rates of Exchange for Currencies of Selected Communist Countries as of 1 April 1967

			Rate of	Exchange		
		In Terms	of US \$1	In Terms of 1 Ruble		
	Unit of Currency	Commercial Rate	Noncom- mercial Rate ^b	Commercial Rate	Noncom- mercial Rate b	
USSR	Ruble	0.90*	0.90*			
Bulgaria	Lev	1.17*	1.99*	1.3*	0.78*	
Czechoslovakia	Koruna	7.2*	14.36*	8.0*	9.66*	
East Germany	Deutsche Mark East	4.2* •	4.2*	4.67* 0	3.20*	
Hungary	Forint	11.74*	23.48*	13.04*	13.12*	
Poland	Zloty	4*	24*	4.44*	15.32*	
Rumania	Leu	6*	12*	6.67*	8.31*	
Communist China	Yuan	2.00*	2.46* d	2.22*	1.29*	
North Korea	Won	1.20*	2.57*	1.35*	1.44*	
North Vietnam	Dong	2.94*	3.7*	3.27*	1.92*	
Albania	Lek	5*	15*	5.56*	8.4*	
Mongolia	Tugrik	4.0*	4.5*	4.44*	4.18*	

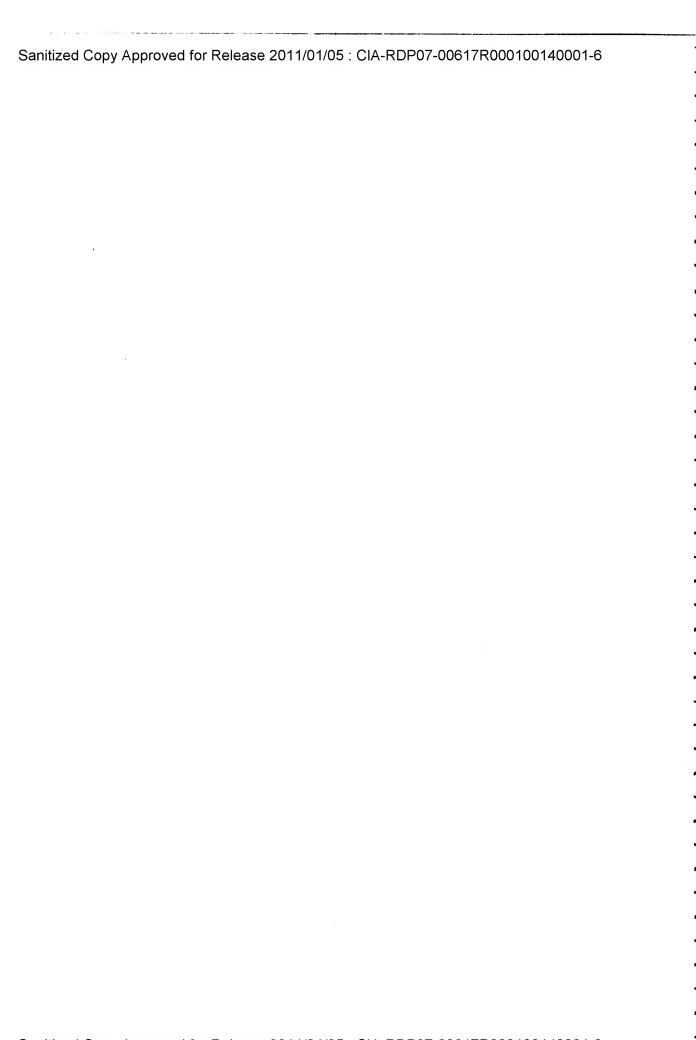

^{*} An asterisk indicates that the data are unclassified.

[•] Official rates unless otherwise indicated. These rates are used for converting trade statistics.

b Rates used for noncommercial transactions such as diplomatic, tourist and student expenditures, personal remittances, and the like. Some countries have special rates for tourists and personal remittances in addition to the noncommercial rate.

[•] The unofficial rates actually used in East German accounting of foreign trade transactions. Official rates still listed, but not used, are 2.22 DME to US \$1 and 2.47 DME to 1 ruble.

d Based on the cross rate of exchange between the yuan and UK pound sterling.
